# FILTRATION GROUP ULTRASTAR STANDARD CAPACITY WOOD FRAME

# Laminar Flow Biosafety/Cleanbench

- 99.97% (HEPA) minimum removal on 0.3µm efficiency
- 99.99% (HEPA)
   minimum removal on
   0.3µm efficiency
   scanned
- 3 pleats per inch
- Fire Retardant & Standard Woodboard frames depth of 3-1/16", 5-7/8" & 11-1/2"
- 100% of filters subject to an efficiency and initial resistance test
- 99.99% filters are "scan" tested according to IES-RP-CC001.3
- UL 900 Class 1 and 2 rating

## DESCRIPTION

he Ultrastar Standard Capacity Wood Frame filter uses hemmed edge, aluminum separators wet laid glass fiber media efficiency of 99.97% and 99.99% on 0.3µm particle size. Designed for easy installation and longer service life.

### BENEFITS

- Built to withstand temperature levels up to 220°F for continuous use
- Frames are sealed on each side with solid resin sealant providing structural rigidity at an economical cost

- Sealed notched corners provide true to square dimensions-leak proof seal
- Designed to withstand and operate in up to 100% of relative humidity
- Ball & Socket gasket joint at all corners prevents corner leaks

### **APPLICATIONS**

The Standard Capacity Wood Frame is designed to optimize performance in filtration applications for the food, automotive, aerospace, optical and biotechnology industries as well as for surgical rooms in hospitals.

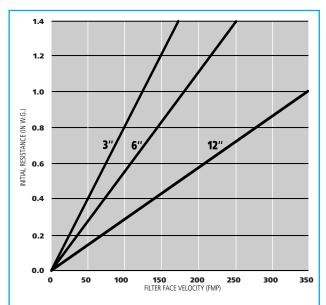

FEATURES	BENEFITS
• Uniform pleat spacing and alignment throughout the filter.	Laminar air flow
• Design eliminates "racking" or damage in handling and installation.	No product damage
• Efficiency & restruction test results printed on each label.  Test results on file.	Traceable
Woodboard frames that are sealed on each side with solid resin sealant, providing structural rigidity.	Durable
• Frame corners secured with screws and urethane sealed on all four sides.	Leak proof
Hemmed-edge aluminum spacers reduce potential media damage from rough-edged separators.	No media damage

### **INITIAL RESTRICTION VS. FACE VELOCITY**

NOTE: This graph represents a typical rating. 3 & 6" filters are tested at 100 FPM and 12" filters are tested at 250 FPM at the factory. The inside face dimension (not including filter frame) is used to calculate resistance. Recommended service restriction is approximately two times the initial restriction at the factory test flow rate.

Filter Face Velocity [FPM] = Rated Flow [cu ft per min] x 144 Height of Filter [in] - (less frame) 1.50" x Width of Filter [in] - 1.50" (less frame)
