

Fasteners are available for Camfil holding frames and housings, or for other manufacturers air filter mounting systems. Our fasteners are designed to ensure that your system air quality is equivalent to the highest level of your system's filter efficiency. Each fastener contributes to an air tight seal between the mounting mechanism and the air filter (requires the appropriate sealing gasket on the filter or the filter mounting mechanism).

Constructed of high-tensile strength metals Camfil fasteners are unchallenged by the repeated rigors of filter change and maintenance. For challenging environments most fasteners can also be manufactured from alternate materials such as stainless steel, contact factory for more information.

**Fasteners to ensure that the system efficiency will be equivalent to the filter efficiency**

The C-81-2 or C-81-4 prefilter fastener inserts into a cavity integral to the Durafil ES<sup>2</sup> frame for face mounting a 2" or 4" prefilter.

C-70 fastener securing the header of a Camfil Hi-Flo, the same fastener may be applied to any 1" nominal size headered air filter.

Notes	1 When using the Farr 30/30 Class 1 filter in this application, a C-77 fastener should be used.			
	2 Two fasteners can be used for upstream application, however it is not recommended.			
	3 C-99 is also available in place of the C-80 to allow for more clearance downstream.			
	4 Hi-Flo filters can be accessed from either upstream or downstream.			
	5 To secure a Riga-Flo PH or Durafil using upstream access only, use a C-70 fastener, part number 050025-000. For the Durafil only, the C-70 fastener may be used on the downstream as well.			
	6 The terms upstream (U) and front access are synonymous, as are downstream (D) and rear access.			
	7 For upstream access & downstream access (Duraflil and Aeropac only) where the filter goes through frame opening a C-70 fastener should be used. When the filter does not go through the frame opening then a C-80 or a C-100 (Aeropac only).
